The *National Listing of Medicare Providers Furnishing Kidney Dialysis and Transplant Services* provides renal beneficiaries with a list of Medicare-approved providers who furnish kidney dialysis and transplant services. By including information on both the location of the providers and on the range of renal services available at those providers, this publication allows beneficiaries and those responsible for their care an improved opportunity to make treatment decisions and referrals.

Acknowledgments

We wish to thank those Health Care Financing Administration Regional Offices and those End Stage Renal Disease Network Organizations who have provided updates to this publication throughout the year. We also extend our appreciation to the following employees of the End Stage Renal Disease and Special Programs Branch, Office of Statistics and Data Management, Bureau of Data Management and Strategy for their effort in preparing this publication: Zermain Breidenbaugh, Jeffrey Grier, Mary Hill, and Ida Sarsitis.

End Stage Renal Disease Providers

Introduction

With the enactment of section 299I of Public Law 92-603 (1972 Amendments to the Social Security Act), full Medicare coverage was extended to persons with end stage renal disease (ESRD), effective July 1, 1973. At that time 606 providers (538 hospital-based and 68 independent) were grandfathered into the Interim Medicare ESRD Program.

In June 1976, Subpart U of Regulations No. 5 was published as final. The basic premise of this subpart defined the requirement of distinct certification of facilities which provide dialysis and transplant services to Medicare-covered ESRD patients. It also spelled out the special health, safety, professional, staffing, and minimum utilization standards directly related to dialysis and kidney transplant services. In addition, these facilities were required to meet Federal, State, and local requirements for medical facility planning. By the end of 1977, 860 (610 hospital-based and 250 independent) providers had applied for and received approval under these regulations.

With the implementation of Subpart U of Regulations No. 5 also came the establishment of the ESRD Program Management and Medical Information System (PMMIS). This system, as required by Public Law 95-292, section (c)(1)(A), is designed to serve the needs of the Department of Health and Human Services in support of program analysis, policy development, and epidemiological research. The ESRD PMMIS includes information both on Medicare ESRD beneficiaries and on Medicare-approved ESRD hospitals and dialysis facilities. Unless otherwise noted, the principal sources of the facility data posted to the PMMIS and contained in this publication are the Medicare certification approval notices, the Online Survey Certification And Reporting System (OSCAR), and information received through the ESRD Network Organizations.

Types of renal care providers

It is estimated that in 1991 over 140,000 patients were treated in the 2,202 Medicare-approved renal facilities. At least 130,000 of these patients received dialysis therapy in one of the 2,084 providers of dialysis services and the remaining patients received a kidney transplant in one of the 228 participating kidney transplant centers.

Dialysis therapy may be received either at home, in a hospital setting (of which there were 207 dialysis facilities and 501 dialysis centers at the end of 1991), or an independent facility setting (of which there were 1,376 at the end of 1991). At the end of 1991, 168 of the 501 dialysis centers noted above were in hospitals that also had approved transplant centers. Finally, we categorized 58 other dialysis centers as inpatient centers because they provide backup dialysis services only, and 20 percent or less of their dialysis service is provided on an outpatient basis. (These 58 centers are not included in the 2,084 outpatient dialysis providers described above.)

Growth in numbers and types of renal providers

Since the Medicare ESRD coverage began in 1973, the total number of Medicare-approved renal providers has more than tripled from 606 in 1973 to 2,202 in December 1991 (Table 1). However, since 1987 the increase in total numbers of renal providers has remained relatively constant at about 6.5 percent annually. Rates of increase calculated from the data in Table 2 show that the increase in 1991 was 6.3 percent; in 1990 was 6.9 percent; and in 1989 was 6.5 percent.

The specific increase in the number of dialysis facilities has been primarily among freestanding facilities; i.e., facilities not affiliated with hospitals. In 1973 there were only about 68 freestanding facilities, which represented about 11 percent of the total number of Medicare-approved dialysis facilities in operation at that time. At the end of 1991, there were 1,376 free-standing dialysis facilities, which represented about 62.5 percent of the total. Again, however, the rate of increase has leveled over the last 5 years and even dropped slightly in 1991. Rates of increase for freestanding dialysis facilities calculated from the data in Table 2 show that the increase in 1991 was 7.4 percent; in 1990 was 10.1 percent; in 1989 was 9.2 percent; and in 1988 was 11 percent.

Type of ownership

In 1988, renal providers were split almost evenly between proprietary and nonprofit (49.9 and 50.1 percent, respectively). By 1991, the proprietary organizations accounted for 8.2 percent more providers than the nonprofit organizations (54.1 and 45.9 percent, respectively). The clear trend is that, while the number of providers in both groups is increasing each year, the proprietary organizations are increasing at a faster rate. In 1990, the number of proprietary renal providers increased 10.4 percent over 1989, but the number of nonprofit organizations increased only 3 percent for the same period. From 1990 to 1991 these figures were 8 percent and 5.3 percent, respectively.

Training services

Prior to the 1978 Amendments to the Social Security Act, 30 percent of dialysis facilities provided training for self-dialysis. The new amendments allowed a waiver of the 3 month qualifying period for beneficiaries who, within the first 3 months of dialysis, participated in a self-dialysis training program in a Medicare approved provider and were expected to self-dialyze thereafter. During this time, and shortly thereafter, approval for continuous ambulatory peritoneal dialysis (CAPD) and continuous cycling peritoneal dialysis (CCPD) was accepted as an effective method of dialysis. These factors encouraged facilities to provide training programs for their patients. Currently, 61 percent of all dialysis

facilities provide self dialysis training. The most popular form of training for home dialysis is CAPD, followed by hemodialysis.

Dialysis stations

A dialysis station is defined as the treatment area which is designed and equipped to provide adequate and safe dialysis therapy. In 1980, there were approximately 12,329 dialysis stations to serve 44,182 outpatient dialysis patients who were dialyzing incenter (3.6 patients per station). In 1985, the number of stations increased to 17,845 and the number of patients to 68,394 (3.8 patients per station). At the end of 1990, the ratio of patients to station increased to 4.3 patients per stations (25,052 stations and 107,160 patients). By the end of 1991 there were 28,812 dialysis stations for approximately 115,000 outpatients. Seventy-two percent of these stations were being operated in independent facilities.

Other dialysis facilities

In cooperation with the Department of Veterans Affairs (DVA), this report presents a list of all DVA dialysis facilities (pages 139-141). Those facilites that participate in the Medicare program are duplicated in the National Listing section. It is estimated that, in 1991, these facilities dialyzed about 3,000 patients.

Urban and rural settings

Calculations from data in Table 7 show that 77.4 percent of dialysis providers are located in an urban setting, while the remaining 22.6 percent are in a rural setting. Of all the dialysis facilities, the largest group are proprietary independent facilities in an urban setting—43.2 percent. The smallest grouping of facilities are rural proprietary hospitals (less than 1 percent).

Table 1

ESRD providers of service by type of service and number of approved dialysis stations: 1973-91

NOTE: Detail does not add to total because most transplant centers also provide dialysis services and are counted again as dialysis providers. See Table 2 for complete certifcation type breakout.

Glossary of Terms

The items appearing in this glossary are intended to assist the reader by supplying operational definitions of the terms used in this publication.

Continuous Ambulatory Peritoneal Dialysis (CAPD) - CAPD is a continuous dialysis process using the patient's peritoneal membrane as a dialyzer. The patient connects a 2-liter plastic bag of dialysate to a surgically implanted indwelling catheter and allows the dialysate to pour into his peritoneal cavity. Four to six hours later the patient drains the fluid out into the same bag, and replaces the old bag with a new bag of fresh dialysate. This is done three to five times a day.

Continuous Cycling Peritoneal Dialysis (CCPD) - CCPD is a treatment modality which combines the advantages of the long dwell, continuous steady state dialysis of CAPD, with the advantages of automation inherent in intermittent peritoneal dialysis. The major difference between CCPD and CAPD is that the solution exchanges which are performed manually during the day by the patient on CAPD are moved to the nighttime with CCPD and are performed automatically with a peritoneal dialysis cycler. The long nighttime dwell of CAPD is moved to the daytime with CCPD.

Dialysis Center - A hospital unit which is approved to furnish the full spectrum of diagnostic, therapeutic, and rehabilitative services required for the care of ESRD dialysis patients (including inpatient dialysis furnished directly or under arrangement).

Dialysis Facility - A unit of a hospital which is approved to furnish dialysis service(s) directly to ESRD patients.

Hemodialysis (HEMO) - A method of dialysis in which blood from a patient's body is circulated through an external device or machine and then returned to the patient's bloodstream. Such an artificial kidney machine usually is designed to remove fluids and metabolic end products from the bloodstream by placing the blood in contact with a semi-permeable membrane which is bathed on the other side by an appropriate chemical solution referred to as dialysate.

Inpatient Dialysis Only - A renal dialysis center which performs 20 percent or less of their dialysis on an outpatient basis.

ESRD Network/Renal Network - All Medicare-approved ESRD facilities in a designated geographic area which collectively furnish the necessary care for ESRD patients.

Peritoneal Dialysis (PERI) - A procedure which introduces dialysate into the abdominal cavity to remove waste products through the peritoneum (the membrane which surrounds the intestines and other organs in the abdominal cavity). It functions in a manner similar to that of the semi-permeable membrane in the hemodialysis machine.

Provider Number - An assigned Medicare number for billing and/or identification purposes which consists of six positions. The first two positions represent a State code. The third and fourth positions represent the type of provider of services. The fifth and sixth positions are sequentially assigned. The following descriptions are used for assigning numbers to renal providers:

0001-0899 Short-Term (General and Specialty) Hospitals
2000-2299 Long-Term Hospitals
2300-2499 Chronic Renal Disease Facilities (Hospital-Based)
2500-2899 Non-Hospital Renal Disease Treatment Centers
2900-2999 Independent Special Purpose Renal Dialysis Facility
3300-3399 Children's Hospitals
3500-3699 Renal Disease Treatment Center (Hospital Satellites)
3700-3799 Hospital Based Special Purpose Renal Dialysis Facilities

Self-Care Services - A unit of a dialysis facility or center where patients dialyze who have been trained to perform self-dialysis with little or no professional assistance.

Staff-Assisted Services - A dialysis setting in which the patient is dialyzed at a facility or center by staff at that facility or center.

Station - The treatment area which is designed and equipped to provide adequate and safe dialysis therapy.

Training Services - A program that trains ESRD patients to perform self-dialysis at a self-care unit or at home with little or no professional assistance, and trains other individuals to assist patients in performing self-dialysis.

Transplant Center - A hospital unit which is approved to furnish direct transplantation and other medical and surgical speciality services for the care of the ESRD transplant patients, including inpatient dialysis furnished directly or under arrangement.
